## Summary

Software Engineer with 3.5 years building high-availability **Java/Spring Boot microservices** for banking and fintech clients (ICICI Bank, Kotak Mahindra Bank). Strong in payments, third-party API integration, and fault-tolerant distributed systems. Daily user of AI-assisted development tools, now building skills in **LLM APIs, prompt engineering, and RAG**.

## Experience

**R360 Global Services**, Bangalore, India

**Software Engineer** April 2026 – Present
**Associate Software Engineer** May 2023 – March 2026

- Delivered **5+ Spring Boot microservices** for the ICICI iShop platform (travel bookings, vouchers, Apple product purchases), sustaining **10K+ API requests/day** with stable performance at peak load.
- Eliminated duplicate transactions across service boundaries by owning the **Phi-commerce payment gateway** integration end to end: payment initiation, async callbacks, reconciliation jobs, retries, and **idempotency keys**.
- Cut product listing response times by **∼30%** and reduced MySQL read-replica load at peak by introducing **Redis caching** with TTL-based invalidation.
- Prevented cascading failures from partner outages by adding **Resilience4j** circuit breakers, retries, and rate limiters across service calls.
- Maintained **zero unauthorized-access incidents** on ICICI and Kotak partner integrations with **Spring Security** (JWT, OAuth2, RBAC).
- Launched flight and hotel booking flows by integrating **ClearTrip, MakeMyTrip, and Yatra** REST APIs, handling authentication, error mapping, and response normalization.
- Reduced reconciliation and reporting execution time and ops escalations by tuning slow **MySQL** queries and adding composite indexes.
- Enabled early detection of production issues with **AWS CloudWatch** dashboards and **Grafana** alerting; sustained **85%+ test coverage** using JUnit5 and Mockito.
- Accelerated delivery by using **GitHub Copilot, Copilot CLI, and Claude** for boilerplate, debugging, test generation, and code review.

## Technical Skills

**Languages & Frameworks:** Java (8, 11, 17), Spring Boot, Spring Security, Hibernate/JPA, REST APIs

**Distributed Systems:** Microservices, Kafka, Event-Driven Architecture, Idempotency, Circuit Breaking, Rate Limiting

**Data:** MySQL, Redis, MongoDB, SQL

**Cloud & DevOps:** AWS (EC2, API Gateway, CloudWatch, Secrets Manager), Docker, CI/CD, Git, Maven

**Testing & Observability:** JUnit5, Mockito, Grafana, Swagger/OpenAPI

**AI:** GitHub Copilot, Copilot CLI, Claude (daily use); *currently learning:* LLM APIs, Prompt Engineering, RAG

## Projects

- **CSV Encryption API** *(Spring Boot, Maven, Docker)*: production-grade REST API for **AES-256** encryption of CSV files, containerized with Docker.
- **RedisBudgetService** *(Java, Redis)*: atomic budget reservation via **Redis Lua scripts**, safe under concurrent requests.

## Education

**B.E. Computer Science**, RGPV, Bhopal May 2020
**Full Stack Java Program**, Geekster Oct 2022 – Mar 2023
